◆ DP-900 Quick Quiz (10 Questions)	3
✓ DP-900 Quick Quiz – Answer Key	5
■ DP-300 Mini Quiz 2 (10 Questions)	6
✓ Answer Key DP-300	8
■ DP-300 Full Practice Quiz (30 Questions).....	9
✓ Answer Key Full 300.....	15

◆ DP-900 Quick Quiz (10 Questions)

Q1. Which scenario best fits a relational database?

- A. Logging IoT sensor data with varying schemas
 - B. Storing customer orders and invoices with defined relationships
 - C. Searching images by tags
 - D. Streaming real-time stock prices
-

Q2. In Azure, which service is most suitable for large-scale data warehousing?

- A. Azure SQL Database
 - B. Azure Cosmos DB
 - C. Azure Synapse Analytics
 - D. Azure Data Lake Storage
-

Q3. What is the main advantage of using partitioning in a database?

- A. Improves security of stored data
 - B. Reduces cost of licensing
 - C. Enhances performance and scalability
 - D. Simplifies schema design
-

Q4. Which data format is most commonly used in NoSQL document databases?

- A. CSV
 - B. JSON
 - C. XML
 - D. Parquet
-

Q5. Azure Data Lake Storage is best described as:

- A. A structured database for transactional workloads
 - B. A highly scalable object storage for big data analytics
 - C. A low-latency in-memory cache
 - D. A managed message queue
-

Q6. Which Azure service is optimized for OLTP (Online Transaction Processing)?

- A. Azure Synapse Analytics
 - B. Azure SQL Database
 - C. Azure Data Explorer
 - D. Azure Databricks
-

Q7. Which consistency model ensures that once data is written, all subsequent reads will always return the latest value?

- A. Eventual consistency
 - B. Strong consistency
 - C. Bounded staleness
 - D. Session consistency
-

Q8. What is the purpose of ETL in data processing?

- A. Encrypt, Transfer, Log
 - B. Extract, Transform, Load
 - C. Evaluate, Test, Launch
 - D. Enable, Track, Link
-

Q9. Azure Cosmos DB offers different APIs for different use cases. Which API would you use for graph data?

- A. Table API
 - B. Gremlin API
 - C. SQL API
 - D. Cassandra API
-

Q10. A company wants to create dashboards for real-time sales insights. Which Azure service best fits this need?

- A. Azure Databricks
 - B. Power BI
 - C. Azure Synapse Pipelines
 - D. Azure Machine Learning
-

✓ DP-900 Quick Quiz – Answer Key

Q1. Which scenario best fits a relational database?

✓ B. Storing customer orders and invoices with defined relationships

Q2. In Azure, which service is most suitable for large-scale data warehousing?

✓ C. Azure Synapse Analytics

Q3. What is the main advantage of using partitioning in a database?

✓ C. Enhances performance and scalability

Q4. Which data format is most commonly used in NoSQL document databases?

✓ B. JSON

Q5. Azure Data Lake Storage is best described as:

✓ B. A highly scalable object storage for big data analytics

Q6. Which Azure service is optimized for OLTP (Online Transaction Processing)?

✓ B. Azure SQL Database

Q7. Which consistency model ensures that once data is written, all subsequent reads will always return the latest value?

✓ B. Strong consistency

Q8. What is the purpose of ETL in data processing?

✓ B. Extract, Transform, Load

Q9. Azure Cosmos DB offers different APIs for different use cases. Which API would you use for graph data?

✓ B. Gremlin API

Q10. A company wants to create dashboards for real-time sales insights. Which Azure service best fits this need?

✓ B. Power BI

 DP-300 Mini Quiz 2 (10 Questions)**Q1.**

You need to migrate a SQL Server 2016 database to Azure SQL Database. Which tool provides the best **assessment** of compatibility issues before migration?

- A. SQL Server Profiler
 - B. SQL Server Migration Assistant (SSMA)
 - C. Azure Data Studio
 - D. SQL Server Management Studio (SSMS)
-

Q2.

Which **consistency model** is used by default in Azure SQL Database?

- A. Eventual Consistency
 - B. Read Committed Snapshot Isolation (RCSI)
 - C. Serializable
 - D. Repeatable Read
-

Q3.

When configuring **high availability** for an Azure SQL Managed Instance, which feature is automatically included?

- A. Log Shipping
 - B. Always On Availability Groups
 - C. Active Geo-Replication
 - D. Zone Redundant Configuration
-

Q4.

You want to monitor query performance in Azure SQL Database. Which tool provides **automatic query performance tuning suggestions**?

- A. SQL Profiler
 - B. Query Store
 - C. Performance Monitor (PerfMon)
 - D. Extended Events
-

Q5.

Which backup frequency is available by default for Azure SQL Database?

- A. Full backups daily, differential backups hourly, log backups every 5–10 minutes
- B. Full backups weekly, differential backups daily, log backups every 5–10 minutes

- C. Full backups monthly, log backups hourly
 - D. Full backups daily, no log backups
-

Q6.

In Azure SQL Database, which option allows **geo-redundant disaster recovery** with automatic failover?

- A. Failover Groups
 - B. Always On Failover Cluster
 - C. Database Mirroring
 - D. Geo-Restore
-

Q7.

You need to enforce **row-level security** in Azure SQL Database. Which object should you create?

- A. Indexed View
 - B. Security Policy
 - C. Dynamic Data Masking Rule
 - D. Database Role
-

Q8.

Which of the following tools is most appropriate for **running ad-hoc T-SQL queries and notebooks** in a cross-platform environment?

- A. SSMS
 - B. Azure Data Studio
 - C. PowerShell
 - D. Azure CLI
-

Q9.

Which **service tier** in Azure SQL Database provides predictable performance with reserved resources (DTUs not used)?

- A. Basic
 - B. Standard
 - C. Hyperscale
 - D. vCore-based
-

Q10.

A company needs to **minimize costs** for a lightly used database that experiences bursts of activity. Which purchasing model should you recommend?

- A. vCore – Provisioned Compute
 - B. DTU Model – Premium Tier
 - C. Serverless vCore Model
 - D. Hyperscale
-

 Answer Key DP-300

1. **B. SQL Server Migration Assistant (SSMA)**
 2. **B. Read Committed Snapshot Isolation (RCSI)**
 3. **D. Zone Redundant Configuration**
 4. **B. Query Store**
 5. **B. Full backups weekly, differential backups daily, log backups every 5–10 minutes**
 6. **A. Failover Groups**
 7. **B. Security Policy**
 8. **B. Azure Data Studio**
 9. **D. vCore-based**
 10. **C. Serverless vCore Model**
-

 DP-300 Full Practice Quiz (30 Questions)

◆ Section 1: Easy (1–10)**Q1.**

Which Azure service provides a fully managed SQL Server instance with near 100% compatibility?

- A. Azure SQL Database
 - B. Azure SQL Managed Instance
 - C. Azure Synapse Analytics
 - D. SQL Server on VM
-

Q2.

Which purchasing model uses DTUs?

- A. Hyperscale
 - B. vCore-based
 - C. Elastic Pools
 - D. DTU-based
-

Q3.

Which service automatically applies security patches in Azure SQL Database?

- A. Microsoft Defender for SQL
 - B. Azure Policy
 - C. Platform-as-a-Service (PaaS) layer
 - D. Transparent Data Encryption (TDE)
-

Q4.

Which SQL Server feature is **NOT supported** in Azure SQL Database?

- A. Partitioned Tables
 - B. Cross-database transactions
 - C. Columnstore indexes
 - D. In-Memory OLTP
-

Q5.

Which command retrieves the current Service Tier and Performance Level in Azure SQL Database?

- A. `SELECT * FROM sys.dm_exec_requests`
- B. `SELECT * FROM sys.database_service_objectives`
- C. `DBCC CHECKDB`
- D. `SELECT * FROM sys.dm_exec_sessions`

Q6.

Azure SQL Database is backed up automatically. How long are backups retained by default in the Standard tier?

- A. 7 days
 - B. 14 days
 - C. 30 days
 - D. 35 days
-

Q7.

Which feature encrypts data at rest in Azure SQL Database?

- A. Always Encrypted
 - B. Transparent Data Encryption (TDE)
 - C. Dynamic Data Masking
 - D. TLS/SSL
-

Q8.

Which tool provides **assessment reports** before migrating SQL Server to Azure?

- A. Data Migration Assistant (DMA)
 - B. SQL Server Profiler
 - C. Extended Events
 - D. Query Store
-

Q9.

What must you configure to allow **Azure AD authentication** in Azure SQL Database?

- A. Firewall rules only
 - B. Azure AD Admin at the server level
 - C. Database role membership
 - D. SQL logins only
-

Q10.

Which service tier is required for **Hyperscale databases**?

- A. DTU-based Basic
 - B. vCore-based General Purpose or Business Critical
 - C. Elastic Pool Standard
 - D. Premium DTU
-
-

◆ Section 2: Medium (11–20)**Q11.**

Which type of **replication** is supported in Azure SQL Database?

- A. Transactional Replication (Subscriber only)
 - B. Peer-to-Peer Replication
 - C. Merge Replication
 - D. Snapshot Replication
-

Q12.

Which DMV helps you identify the **top resource-consuming queries** in Azure SQL Database?

- A. sys.dm_db_index_usage_stats
 - B. sys.dm_exec_query_stats
 - C. sys.dm_exec_requests
 - D. sys.dm_db_resource_stats
-

Q13.

You need to configure **transparent failover** between primary and secondary databases in different regions. Which option should you use?

- A. Geo-Restore
 - B. Active Geo-Replication
 - C. Failover Groups
 - D. Always On Availability Groups
-

Q14.

Which service tier guarantees **low-latency high I/O performance** and is optimized for business-critical apps?

- A. General Purpose
 - B. Hyperscale
 - C. Business Critical
 - D. Elastic Pool
-

Q15.

Which command checks the last backup date for a database in Azure SQL Managed Instance?

- A. RESTORE VERIFYONLY
 - B. SELECT * FROM msdb..backupset
 - C. SELECT * FROM sys.dm_database_backups
 - D. DBCC CHECKDB
-

Q16.

Which Azure monitoring service provides **built-in alerts and dashboards** for SQL performance?

- A. Azure Monitor
 - B. Log Analytics
 - C. SQL Profiler
 - D. Performance Monitor
-

Q17.

Which feature lets Azure SQL Database **automatically force last known good plans** for queries?

- A. Query Store
 - B. Automatic Plan Correction
 - C. Extended Events
 - D. Hints
-

Q18.

Which method provides **point-in-time restore** for Azure SQL Database?

- A. Geo-restore
 - B. Long-term backup retention (LTR)
 - C. Automatic backups
 - D. Always On
-

Q19.

Which tool is best suited to run **Kusto Query Language (KQL)** against diagnostic logs from Azure SQL Database?

- A. SQL Server Management Studio
 - B. Azure Data Explorer / Log Analytics
 - C. Query Store
 - D. SQL Profiler
-

Q20.

Which security feature replaces sensitive values with placeholders at query time?

- A. Always Encrypted
 - B. Transparent Data Encryption
 - C. Dynamic Data Masking
 - D. Row-Level Security
-
-

◆ Section 3: Hard (21–30)**Q21.**

You need to migrate a **10TB on-premises database** with minimal downtime to Azure SQL Managed Instance. Which approach is recommended?

- A. BACPAC export/import
 - B. Transactional Replication
 - C. Log Shipping + Database Migration Service (DMS)
 - D. Copy Database Wizard
-

Q22.

Which isolation level provides the **least concurrency issues** in Azure SQL Database?

- A. Read Committed
 - B. Read Uncommitted
 - C. Serializable
 - D. Snapshot
-

Q23.

Which DMV helps detect **blocking sessions** in Azure SQL Database?

- A. sys.dm_exec_sessions
 - B. sys.dm_exec_requests
 - C. sys.dm_tran_locks
 - D. sys.dm_exec_connections
-

Q24.

You are designing a **multi-tenant SaaS application**. Which Azure SQL Database option provides **best cost efficiency**?

- A. Single Database – vCore provisioned
 - B. Single Database – Hyperscale
 - C. Elastic Pool
 - D. SQL Managed Instance
-

Q25.

Which tool allows **notebook-style experiences** with T-SQL, Python, and PowerShell for DBAs?

- A. SQL Server Management Studio (SSMS)
 - B. Azure Data Studio
 - C. SQL Profiler
 - D. Log Analytics
-

Q26.

Which method is best for encrypting **data in transit** for Azure SQL Database connections?

- A. TDE
 - B. Always Encrypted
 - C. TLS/SSL
 - D. Row-Level Security
-

Q27.

In Azure SQL Database, what's the **max storage** supported in the Hyperscale tier?

- A. 4 TB
 - B. 8 TB
 - C. 100 TB
 - D. Unlimited
-

Q28.

Which DMV shows **wait statistics** in Azure SQL Database?

- A. sys.dm_exec_query_stats
 - B. sys.dm_os_wait_stats
 - C. sys.dm_tran_session_transactions
 - D. sys.dm_exec_requests
-

Q29.

You configure **automatic tuning** in Azure SQL Database. Which settings can it adjust automatically?

- A. Index creation and dropping, force last good plan
 - B. TempDB file growth, statistics updates
 - C. Partitioning strategies
 - D. Always Encrypted policies
-

Q30.

Which option allows retaining backups for **up to 10 years** in Azure SQL Database?

- A. Geo-Replication
 - B. Long-Term Retention (LTR)
 - C. Active Failover Groups
 - D. Point-in-Time Restore
-
-

✓ Answer Key Full 300

Easy (1–10):

1-B, 2-D, 3-C, 4-B, 5-B, 6-D, 7-B, 8-A, 9-B, 10-B

Medium (11–20):

11-A, 12-B, 13-C, 14-C, 15-C, 16-A, 17-B, 18-C, 19-B, 20-C

Hard (21–30):

21-C, 22-D, 23-B, 24-C, 25-B, 26-C, 27-C, 28-B, 29-A, 30-B
